## **MCE Technologies Announces QuickStream DV: “Zero-time” Record to Edit Capture and Storage Solution**

Irvine, CA – MCE Technologies, LLC today announces the QuickStream DV, a portable digital video capture and storage solution that dramatically accelerates the post-production process. With the real-time acquisition of digital video directly to the QuickStream DV, MCE has effectively eliminated the entire digitizing process - as footage is now available for immediate editing. Files import directly into Quicktime based video editing applications such as Final Cut Pro, Adobe Premier, and iMovie.

The Quickstream DV can be set to record simultaneously alongside the camera’s videotape, creating an identical backup, as well as record without the need for tape. When in tape-less mode, the DV camera can record up to 4.5 hours of continuous uninterrupted video. QuickStream DV transforms the conventional plastic cased digital videotape media into a secure hermetically sealed and crushproof medium.

“We have heard the demand for a ‘zero- time record to edit’ solution and QuickStream DV is the answer,” said Arnie Ramirez, President, MCE Technologies, LLC. “Research indicates many editors spend over 25 hours per month just in video digitizing - their investment in a QuickStream DV will easily be recovered within the first month of use.”

The QuickStream DV is extremely portable, featuring the Multidapt attachment system which provides multiple carrying options, and is ruggedized - utilizing a rubberized outer shell and internal shock-absorption system. Because the QuickStream DV was designed to operate from the “powerless” 4-pin FireWire port found on DV cameras, the unit is self-powered by an internal lithium-ion-polymer battery that recharges automatically via the computer's Firewire port, external AC adapter (included), or auto adapter. The QuickStream DV works with any DV camera with a Firewire , IEEE 1394, or iLink™ DV Interface. Supports operating systems MacOS 9.2 and above, Windows 98SE/2000/XP and Linux. The QuickStream DV is bundled with utility software including "DV Size" and a drive defragmenter, a 4 pin to 6 pin FireWire cable and a user’s guide.

QuickStream DV comes in three models: 90 minutes, 3 hours, and 4.5 hours of recording time each carrying an MSRP of \$499, \$599, and \$799 respectively. An optional auto adapter will be available for \$14.99.

MCE Technologies, LLC designs and markets a wide range of Apple Macintosh - related products and solutions to distributors, dealers, and end-users domestically and internationally.
